

Legacy MDM to Reltio Migration Utility

Today, organizations are looking for light-weight and modern solutions to manage their master data. This includes evolving from legacy MDM systems like Informatica to more modern cloud-based solutions like Reltio that empower lines of business by providing reliable data, elastic scalability and analytical capabilities.

Given the rapid transition to cloud ecosystems in the space of Data Management and Data Governance, it is essential that organizations adapt to a modern MDM platform like Reltio to ensure future readiness.

The Problem

Legacy MDM systems are often:

- On-premise and lack the capability to adapt to quickly changing business needs
- Time consuming and complex to integrate with other (mostly cloud) systems
- Require much longer to implement and deploy

The Solution

- A robust, cloud-based solution that is easier to implement and deploy
- Seamless integration in the cloud with other integration systems
- A more in-depth capability to handle large volumes at scale
- Ability to handle data from hundreds of sources and thousands of attributes
- Capacity to manage billions of actionable and up-to-date records to power real-time operations at scale
- Ability to manage complex relationships between business entities

Legacy MDM to Reltio Migration Utility

Fresh Gravity's Legacy MDM to Reltio Migration Utility ensures a smooth transition of configuration objects and data from Legacy MDM to Reltio, taking less time while keeping all core features and functions intact. It also guarantees configurations and data are migrated with minimum manual intervention.

Migration Utility Components

Configuration Migration

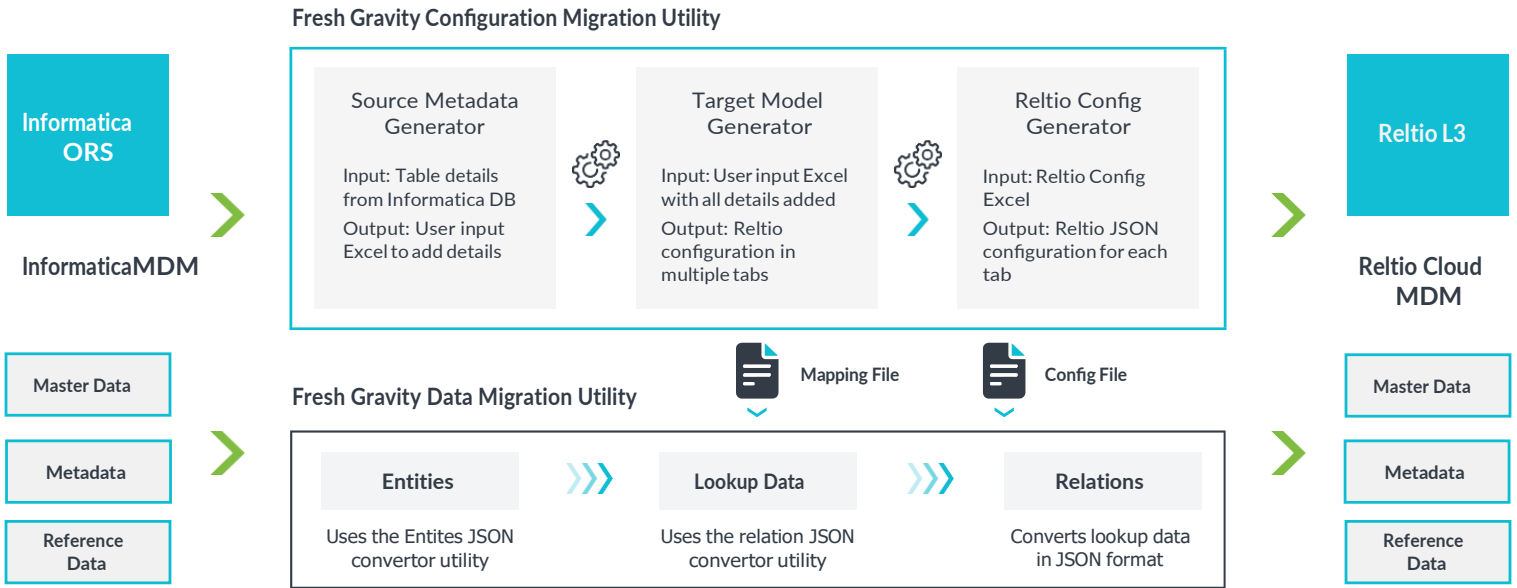

The Configuration Migration converts the following components from Legacy MDM to Reltio-specific format and builds a JSON that can be migrated directly into the Reltio tenant:

- Base object and their attributes
- Lookups
- Source systems
- Match rules
- Users and roles

Data Migration

The Data Migration extracts data from Legacy MDM data stores using SQL queries, generates files of data that are fed to data loader and the data is loaded to Reltio tenants.

Migration Utility Architecture

Benefits

The Legacy MDM to Reltio Migration Utility:

- Features a convenient user interface to migrate MDM configuration and data
- Reduces manual effort involved in migrating configuration and data
- Eliminates 60-70% of the time required for migration
- Has highly customizable code for complex client requirements
- Reduces risk and possible errors which occur with manual migration
- Automates collaborations within the migration team
- Is a one-stop platform to manage configuration as well as data migration

About Fresh Gravity

Founded in 2015, Fresh Gravity is an innovation-driven Data and Analytics consulting firm that helps businesses make data-driven decisions. We are driven by data and its potential as an asset to drive business growth and efficiency. We are passionate innovators who solve clients' business problems by applying best-in-class data and analytics solutions. For more information, contact us at info@freshgravity.com.
